- Asthma or Chronic Respiratory

*As changes to the protocol as of 12/14/2021.

MWHC RN will contact patient within 24-48 hours.

Mary Washington Healthcare Monoclonal Antibody Infusion Process

Monoclonal Antibody Treatment Indications

- High risk patients for progressive disease with mild to moderate COVID-19
- *Not for those requiring hospitalization, hypoxic, or requiring new or increase in oxygen (from baseline)
- *Special considerations need to be made for fully vaccinated patients

Special Considerations

- ***Fully vaccinated patients with positive COVID-19 PCR**
 - Evaluate for history of COVID-19
 - **Affirm** >2 weeks from completion of vaccine schedule (from **2nd** dose or from initial J&J dose)
 - Consider underlying risks (e.g., immunocompromised hosts)
 - Rule out other causes for symptoms
 - Rare hospitalizations seen in fully vaccinated patients even with variants
 - HL Screening RN will consult with infectious disease team Team as to appropriateness of monoclonal antibody (mAb) if fully vaccinated
 - Choice of monoclonal antibody will be adjusted with variant tracking prevalence
